Feed supplement for horses and ponies

EMH is a plant extract from effective herbs which has been fermented using micro-organisms, and it has already proved to have achieved positive results in equine nutrition. Older horses, and those convalescing, have special demands regarding daily nutrition. The ability to store nutrients is compromised and therefore the immune system can be weakened. In using EMH, an improved availability of nutrients and active ingredients is achieved, and therefore the total utilisation of the feed optimised. By the construction of a protective barrier in the digestive tract and stimulation of the local immune system in the gut, the complete immune function of the body is stabilised. Highly valuable proteins and balanced levels of vitamins and trace elements ensure an improvement in the general wellbeing of your horse.
