Volaris Fat Feed

All-Season Feed

Our Fat Feed is particularly high in fat and energy. It contains valuable fatty acids, which provide birds in the wild with optimum nourishment during the colder months and the fledgling season. The grains in this mix also help to keep their beaks strong and sharp. This scatter feed is suitable for all kinds of birds and can be fed all year round.

The benefits at a glance:

- for all species of birds
- easy to feed
- high in fat and energy
- for year-round feeding

Recommended feeding:

Our volaris FATfeed is suitable for year-round feeding! If you offer the feed in bird houses or feeders, clean them regularly with hot water. In this way you minimise the transmission and spread of pathogens. Make sure that the feed cannot get soaked even in strong winds, snow and rain, otherwise it will spoil or freeze and the birds will no longer eat it.

Did you know that robins, yellowhammers, dunnocks and blackbirds are so-called ground feeders? They don't like to go to the feeder, but prefer to pick up the seeds from the ground. If you have space in your garden, provide a ground feeder. Simply fill a wooden or plastic bowl with feed and place it on the ground.

If you offer feed, please also provide drinking water for the birds. Especially in winter, when natural water sources such as puddles or water in gutters are frozen, birds also need an extra bowl of water. However, there is no need for an expensive bird bath at the bird feeder; a flower pot saucer or an old soup plate are perfect as a watering place. The water should be changed regularly.

Composition: kviečių dribsniai, avižų dribsniai, pieninės usnies aliejus, Raisins, Peanuts
